ACSL Word Search

Time Remaining 2:08 hrs:mins

CLASS / SOURCE NAME

Nameyourclass acslword.

**PROBLEM:** Given a grid containing letters along with a list of words, find where each word appears in the grid. A word can appear horizontally (left-to-right or right-to-left), vertically (top-to-bottom or bottom-to-top), or diagonally (in any direction). Words can overlap, but no wrap-around is permitted. Output the letters in the grid that are not used, in row-major order.

Each word will appear in exactly one place in the grid.

EXAMPLE:

Input:  
6 7  
XSTJCLNADAIA RORVSCPUHAASSLBTBAIOLYPLOBOCP  
PASCAL LISP BASIC COBOL JAVA PYTHON ADA RUBY

Solution:  
The initial grid is at the left. The image at the right shows where the words appear.

|   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|
| X | S | T | J | C | L | N |
| A | D | A | I | A | R | O |
| R | V | S | C | P | U | H |
| A | A | S | S | L | B | T |
| B | A | I | O | L | Y | Y |
| P | L | O | B | O | C | P |

Output:  
XSTRLOL

**INPUT:** Input 3 strings. The first string is the number of rows and columns in the grid, with a single space between them. The second string is the characters in the grid in row-major order. The third string is the list of words to find, with a single space between each word.

**OUTPUT:** After finding all of the given strings, output, in row-major order, a string of all of the characters that are not used in the grid.

| SAMPLE INPUT  | SAMPLE OUTPUT                    |

-----中文仅供参考，以英文为准-----

**问题:** 给定一个包含字母的网格和一系列单词，找出每个单词在网格中的位置。单词可以横向（从左到右或从右到左）、纵向（从上到下或从下到上）或在任意对角线方向出现。单词可以重叠，但不允许环绕。按行优先顺序输出网格中未使用的字母。每个单词在网格中恰好出现一次。

**示例:**  
输入:  
6 7  
XSTJCLNADAIARORVSCPUHAASSLBTBAIOLYYPLOBOCP  
PASCAL LISP BASIC COBOL JAVA PYTHON ADA RUBY

**解析:**  
左图是初始网格。右图显示单词出现的位置。

输出:  
XSTRLOL

**输入:** 输入 3 个字符串。第一个字符串表示网格的行数和列数，这两个数字之间用一个空格隔开。第二个字符串是网格中按行优先顺序排列的字符。第三个字符串是要查找的单词列表，每个单词之间用一个空格隔开。

**输出:** 找到所有给定单词后，按行优先顺序输出网格中所有未使用的字符。

| 样例输入  | 样例输出                             |

- 注意：
- (1) 样本数据仅为部分测试数据，测试用例全部通过不代表通过本题。
  - (2) 你必须通过数据库中所有的测试点才能获得该题满分。
  - (3) java 语言里面的 class name（类名）需要用本题的 Source file name（即：acslword）。
  - (4) 平台判分规则为调取 10 次 input 值，每次单独判分。
