2021 Finals • Solutions to Short Problems • Elementary Division

1. Boolean Algebra

The only option that includes only these 6 numbers is if $a > 3$ and $a < 7$ which includes 4, 5, and 6 OR $a > 15$ and $a < 19$ which includes 16, 17, and 18 only. D does not include the boundary conditions and switching the AND with the OR yields all possible numbers in A and C.

1. $(a > 3 \text{ AND } a < 7) \text{ OR } (a > 15 \text{ AND } a < 19)$ (B)

2. Boolean Algebra

To simplify $\sim AB + \sim A + B * \sim(A + \sim B)$
 $= \sim A(B + 1) + B(\sim AB)$
 $= \sim A + \sim AB$
 $= \sim A$

2. $\sim A$ (D)

3. Boolean Algebra

The truth table used to evaluate $A * B \% A + \sim A \% B$ is:

A	B	$\sim A$	$B \% A$	$A * B \% A$	$\sim A \% B$	$A * B \% A + \sim A \% B$
0	0	1	1	0	1	1
0	1	1	1	0	0	0
1	0	0	1	1	1	1
1	1	0	0	0	1	1

Therefore, there are 3 ordered pairs that make the expression TRUE.

3. 3 (C)

4. Prefix-Infix-Postfix

The postfix expression $4\ 3\ *\ 6\ 2\ /\ -\ 2\ ^$ can be evaluated as:
 $(4 * 3) (6 / 2) - 2 ^$
 $(12 - 3) 2 ^$
 $9 ^ 2 = 81$

4. 81 (A)

<p>5. Prefix-Infix-Postfix</p> <p>The prefix expression $-^{\wedge} @ 1 9 2 @ * 3 7 / 9 3$ can be evaluated as:</p> <p>$-^{\wedge} (@ 1 9) 2 (@ (3 * 7) (9 / 3))$</p> <p>$-^{\wedge} ((1 + 9) / 2) 2 ((21 + 3) / 2)$</p> <p>$-(5^{\wedge} 2) 12 = 25 - 12 = 13$</p>	<p>5. 13 (B)</p>										
<p>6. Prefix-Infix-Postfix</p> <p>The postfix expression $4 5 * 8 2 / + 7 * 4 2 ^ -$ can be translated to prefix by moving only the operators as follows:</p> <p>$(((4 5 *) (8 2 /) +) 7 *) (4 2 ^) -$</p> <p>$(- (* (+ (* 4 5) (/ 8 2)) 7) (^ 4 2))$</p> <p>$- * + * 4 5 / 8 2 7 ^ 4 2$</p>	<p>6. $- * + * 4 5 / 8 2 7 ^ 4 2$ (A)</p>										
<p>7. Computer Number Systems</p> <p>$DEAD_{16}$ $D - E = F \Rightarrow (13 + 16) - 14 = 29 - 14 = 15$ and A becomes 9.</p> <p>$- ABE_{16}$ $9 - B = E \Rightarrow (9 + 16) - 11 = 25 - 11 = 14$ and E becomes D.</p> <p>----- $D - A = 3 \Rightarrow 13 - 10 = 3$ so the D stays the same.</p> <p>$D3EF_{16}$ When subtracting in base 16, you must borrow 16 if needed.</p>	<p>7. $D3EF_{16}$ (D)</p>										
<p>8. Computer Number Systems</p> <p>To evaluate $20_{16} + 21_8$ you must convert each to base 10 and add them.</p> <p>$20 = 2 * 16 + 0$ and $21 = 2 * 8 + 1$ so $32 + 17 = 49$</p>	<p>8. 49 (C)</p>										
<p>9. Computer Number Systems</p> <p>Each of these numbers can be converted to any common base by grouping 3 binary digits for base 8 and 4 bits for base 16.</p> <table border="1" data-bbox="107 1598 1044 1835"> <tbody> <tr> <td>$10110111_2 = 267_8 = B7_{16}$</td> <td>$11001010_2 = 312_8 = CA_{16}$</td> </tr> <tr> <td>$BE_{16} = 10111110_2 = 276_8$</td> <td>$267_8 = 10110111_2 = B7_{16}$</td> </tr> <tr> <td>$356_8 = 11101110_2 = EE_{16}$</td> <td>$CA_{16} = 11001010_2 = 312_8$</td> </tr> <tr> <td>$11101111_2 = 357_8 = EF_{16}$</td> <td>$11011000_2 = 330_8 = D8_{16}$</td> </tr> <tr> <td>$B7_{16} = 10110111_2 = 267_8$</td> <td>$357_8 = 11101111_2 = EF_{16}$</td> </tr> </tbody> </table> <p>The one that occurs most often occurs 3 times: $10110111_2 = 267_8 = B7_{16}$</p>	$10110111_2 = 267_8 = B7_{16}$	$11001010_2 = 312_8 = CA_{16}$	$BE_{16} = 10111110_2 = 276_8$	$267_8 = 10110111_2 = B7_{16}$	$356_8 = 11101110_2 = EE_{16}$	$CA_{16} = 11001010_2 = 312_8$	$11101111_2 = 357_8 = EF_{16}$	$11011000_2 = 330_8 = D8_{16}$	$B7_{16} = 10110111_2 = 267_8$	$357_8 = 11101111_2 = EF_{16}$	<p>9. 3 (B)</p>
$10110111_2 = 267_8 = B7_{16}$	$11001010_2 = 312_8 = CA_{16}$										
$BE_{16} = 10111110_2 = 276_8$	$267_8 = 10110111_2 = B7_{16}$										
$356_8 = 11101110_2 = EE_{16}$	$CA_{16} = 11001010_2 = 312_8$										
$11101111_2 = 357_8 = EF_{16}$	$11011000_2 = 330_8 = D8_{16}$										
$B7_{16} = 10110111_2 = 267_8$	$357_8 = 11101111_2 = EF_{16}$										

<p>10. Graph Theory</p> <p>Traversals must start and end with the 2 vertices that have odd degree which are A and E. They must use each edge once and only once. Therefore, the only possible answer given these choices is ACBADCE.</p>	<p>10. ACBADCE (D)</p>
<p>11. Graph Theory</p> <p>If you draw the graph, the edges are BC, DS, CA, AP, DP, PS, CD, and PB so Pittsburgh is the one-stop layover from Buffalo to Seattle.</p>	<p>11. Pittsburgh (C)</p>
<p>12. Graph Theory</p> <p>The 6 unique cycles ABDCA, ABDEA, ABDCFA, ACDEA, ACFA, AEDCFA, and, but they are counted both ways so there are 12 total.</p>	<p>12. 12 (D)</p>
